

Geology

Geology is a new subject for most students at A Level, so any reading about the building blocks of the subject – minerals, rocks, fossils, time and hazards will be useful. The Geological Society has some excellent introductory resources in the Education and Careers section of their website.

There are a good range of Geology books available:

- The 'Very short introduction' series of books are very good and cover a range of Geological themes.
- For an introduction to the history of Geology as a subject, 'The map that changed the world' by Simon Winchester is a really good read.
- For a greater challenge 'The Human Planet: How we created the Anthropocene' by Lewis and Maslin is useful

There are also some useful resources online for you to view:

- Discovering Geology from the British Geological Survey at bgs.ac.uk/discovering-geology
- Careers in Geology from the Geological Society at geolsoc.org.uk/education
